

10 COMBINATION ON-LINE SWEEPSTAKES AND SALES SYSTEM

BACKGROUND OF THE INVENTION

009270-0992960
5 This application claims priority from U.S. provisional application 60/145,910 filed July 27, 1999 and relates to an Internet web site that combines an on-line sweepstakes with an on-line sales function in an effort to attract visitors to the web site, visitors that are then redirected to sponsors' web sites, thereby generating advertising revenue. The entire disclosure contained in U.S. provisional application 60/145,910, including the attachments thereto, is incorporated herein by this reference.

20 With the Internet continuing to grow at an exponential pace, web sites must fiercely compete in order to attract visitors and potential customers. According to the Netsizer counter located at <http://www.netsizer.com>, as of July 2000, there were more than 84 million Internet hosts worldwide. Thus, an individual user is presented with the opportunity to surf through a virtually endless collection of web sites. The problem web site marketers face is how to attract
25 visitors, and specifically those visitors who are within a targeted demographic, to a particular web site. Clearly, the more visitors there are to a particular web site, the most attractive the site becomes to advertisers who want their products viewed by as many potential customers as

possible.

In order to attract visitors, web sites offer various "content" including, for example, news, weather reports, interactive games, and chat rooms. Recently, on-line giveaways, sweepstakes, and similar promotions have also become a popular means for attracting visitors. Although such promotions may generate traffic through the web site, providing such financial incentives is expensive, and advertisers have no guarantees that the visitors frequenting the web site fit their definition of "potential customers."

It is an object of the present invention to provide a system that incorporates a sweepstakes components that attracts Internet users to the web site incorporating the system of the present invention.

It is a further object of the present invention to provide a system that incorporate a sales component that serves as an alternative to on-line auctions, specifically allowing users to sell merchandise at an established selling price.

It is a further object of the present invention to provide a system that effectively and efficiently matches advertisers with targeted consumers specifically Internet users matching a particular demographic profile.

These and other objects and advantages of the present invention will become apparent upon a reading of the following description.

SUMMARY OF THE INVENTION

The following invention pertains to a system that includes an Internet web site employing a sweepstakes promotion to attract visitors. To enter the sweepstakes, however, visitors are asked to provide demographic information, such as age, sex, and household income. The systems then utilizes this information to determine what advertisements to display or what web sites the visitor should be directed to. Additionally, the system includes a sales component which is used to provide the sweepstakes prizes.

DESCRIPTION OF THE PRESENT INVENTION

The following invention pertains to a system that includes an Internet web site employing
a sweepstakes promotion to attract visitors. To enter the sweepstakes, however, visitors are
requested, but not necessarily required, to provide demographic information, such as age, sex,
and household income. The system then utilizes this information to determine what web sites the
visitor should be directed to and what advertisements to display. Additionally, the system
includes a sales component which is used to provide the sweepstakes prizes, as will be explained
20 in further detail below.

Prior to viewing the various components and features of the preferred system as
implemented through an Internet web site, the operation of the system is best explained by an

example: User A has a computer that he would like to sell. Such a user is termed a "prize presenter" in the system of the present invention. Since User A has been unable to sell the computer at the price he wants, he decides to list the computer on the web site that hosts the preferred combination on-line sweepstakes and sales system of the present invention. User A
5 wants \$500 for the computer, and thus lists \$500 as the "selling" price of the computer. User B visits the preferred web site and is interested in the computer. User B thus registers as a sweepstakes "player," entering various demographic information in response to questions presented by the system. After registering, User B clicks on the listing for the computer and is re-directed to an advertiser's web site, this site having been selected based on an analysis of the demographic information User B entered when registering. User B is now entered into a
10 sweepstakes for the computer.

The advertiser to whose web site User B was directed pays for the "hit." If, for example, the advertiser is willing to pay \$0.25 for each hit generated by the system of the present invention, after 2000 hits, \$500 in revenue would be generated. This is the price User A was
15 seeking for his computer. The sweepstakes for the computer would end, and one of the players entered in this particular sweepstakes would be randomly selected as the winner of the computer. User A is then responsible for delivering the computer to the winner. Once delivery has been verified, User A will receive a check for \$500 from the system administrators, the \$500 being generated by the advertising revenue associated with the sweepstakes.

20 In order for the system administrator to realize a profit for providing the sweepstakes and sales services, it is contemplated that each listed item will be "marked up" at a predetermined rate. For example, the computer described in the above example might be marked up 10% to

\$550, thereby requiring 200 additional "hits" to be generated prior to the sweepstakes. Once \$550 in advertising revenue had been realized, the administrator would transmit \$500 to the seller and realize a \$50 profit.

The system, as described, is attractive to advertisers as it efficiently matches
5 advertisements with users falling within targeted demographics. Since advertisers can better direct their advertisements towards certain individuals or segments of the population, the advertisers are likely to pay a higher price per hit.

For individuals interested in selling items (i.e., "prize presenters"), the preferred system is an attractive alternative to standard auctions, as the prize presenters can set their price. No
10 negotiation or mandatory acceptance of a bid is necessary. The system, however, does encourage reasonable selling prices as the system displays to visitors how many more "hits" are required to be generated prior to the sweepstakes. Thus, if a prize presenter lists a \$50 radio at a selling price of \$50,000, very few, if any, visitors are going to waste their time entering a sweepstakes that will require 200,000 hits to be generated before the \$50 radio is given away. Nevertheless, it
15 is further contemplated that the system of the present invention impose limits on the "marking up" of a prize from its estimated value.

The appended Figures depict various screen shots of a preferred system in accordance with the present invention, along with detailed flow charts that demonstrate use of and movement through the system by users.

20 Figure 1 depicts the HOME SCREEN or opening screen 10 of a preferred system in accordance with the present invention, said screen 10 being displayed in the commonly used Netscape® Internet browser. As shown, this screen 10 preferably includes a banner

advertisement location 12 that appears at the top of the screen 10. Through presentation of advertising banners in this location 12, additional revenue may be generated by the system administrator providing the sweepstakes and sales services in accordance with the present invention. Of course, various advertisements will rotate through this banner advertisement location 12. Furthermore, such a banner advertisement location 12 is included on each and every screen of the preferred system; however, the following description will not particularly point out and describe the banner advertisement location on each and every screen.

The HOME SCREEN 10 also includes a central message window 14. Various text messages, images, and/or hyperlinks can be displayed in this window 14, as shown in Figure 1. Along the periphery of this window 14 are a series of buttons 16 and a series of tabs 18. For purposes of this description, a "button" is an image that can be selected through the clicking of a computer mouse or use of a similar input device to redirect a user to another Internet web page. A "tab" is an image that can similarly be selected through the clicking of a computer mouse or use of a similar input device to either redirect a user to another Internet web page or to open a new document or image into the central message window 14.

In this preferred system, there are four buttons arrayed along the central message window 14: a LOGIN button 16a, a WIN PRIZES button 16b, a PRESENT A PRIZE button 16c, and an ADVERTISE WITH US button 16d. It is important to note that, although these buttons are not particularly pointed out with reference to all of the screens described in this specification, these four buttons do appear on each and every screen of the preferred system. Aside from the LOGIN button 16a, these buttons each perform the identical function when selected regardless of which screen is being displayed at the time the button is selected.

In this preferred system, there are also five tabs arrayed along the top of the central message window 14: a HOME tab 18a, a PRIZES tab 18b, a MY CYBERSTAKES tab 18c, a MY WISH LIST tab 18d, and a HOW TO PLAY tab 18e. Similar to the buttons 16 described above, it is important to note that, although these tabs 18 are not particularly pointed out with reference to all of the screens described in this specification, these five tabs do appear on each and every "player" screen of the preferred system. In this regard, a "player" screen is distinguished from a "prize presenter" screen or an "advertiser" screen, a distinction that will be clarified below.

Figure 28 is a flow chart depicting navigation through and operation of the system, beginning from the HOME SCREEN 10. As shown in Figure 28, when a user first enters the Internet (i.e., Worldwide Web) address associated with the system of the present invention into an Internet browser (e.g., Netscape® or Microsoft Explorer®), an advertising banner is retrieved as indicated by the RETRIEVE BANNER process 400, and the HOME SCREEN 10 (as depicted in Figure 1) is displayed. For a user to continue through the system, one of the buttons 16 or tabs 18 must be clicked or otherwise selected by the user.

If a user is a registered user of the system or wishes to become one, he would select the LOGIN button 16a, as indicated at SELECTION 402 of Figure 28. A new advertising banner would be retrieved as indicated by RETRIEVE BANNER 404, and the user would be re-directed to the LOGIN SCREEN 20, as depicted in Figure 2 and which will be more fully described below.

If the user would like to view available prizes or enter one or more of the sweepstakes, he would select the WIN PRIZES button 16b at SELECTION 406 of Figure 28. Again, a new

advertising banner would be retrieved as indicated by RETRIEVE BANNER 408, and the user would be re-directed to the PRIZES SCREEN 50, as depicted in Figure 3 and which will be more fully described below.

If the user is a prize presenter or wished to become one, he would select the PRESENT A PRIZE button 16c at SELECTION 410 of Figure 28. Again, a new advertising banner would be retrieved as indicated by RETRIEVE BANNER 412, and the user would be re-directed to the PRESENTING HOME SCREEN 100, as depicted in Figure 13 and which will be more fully described below.

Finally, if the user is an advertiser or wishes to become one, he would select the ADVERTISE WITH US button 16d at SELECTION 414. Again, a new advertising banner would be retrieved as indicated by RETRIEVE BANNER 416, and the user would be re-directed to the ADVERTISING HOME screen 170, as depicted in Figure 21 and which will be more fully described below.

As mentioned above, the tabs 18 included on the HOME SCREEN 10 are "player" tabs in that they are designed for a user that will be playing for sweepstakes prizes. It is assumed that the majority of visitors to the web site hosting the system of the present invention will be players, rather than prize presenters or advertisers. Other tabs will be included on the various screens related to prize presenters and advertisers, as will be discussed below.

Referring still to Figure 28 and the tabs 18 shown in Figure 1, if a player wishes to view available prizes or enter one or more of the sweepstakes, he would select the PRIZES tab 18b at SELECTION 418. A new advertising banner would be retrieved as indicated by RETRIEVE BANNER 420, and the user would be re-directed to the PRIZES SCREEN 50, as depicted in

Figure 3 and which will be more fully described below.

To view a personalized screen detailing information about the registered player, the player would select the MY CYBERSTAKES tab 18c at SELECTION 422, which would initiate the subroutine depicted in Figure 34.

5 To view a personalized screen detailing information about the prizes sought by the registered player, the player would select the MY WISH LIST tab 18d at SELECTION 424, which would initiate the subroutine depicted in Figure 39.

To view instructions on how to play, that is, instructions on how the preferred system works, the player would select the HOW TO PLAY tab 18e at SELECTION 426. A new
10 advertising banner would be retrieved as indicated by RETRIEVE BANNER 428, and the user would be re-directed to the HOW TO PLAY screen 92, as depicted in Figure 12 and which will be more fully described below.

15 Finally, as mentioned above, various hyperlinks can be displayed in the central message window 14 of the HOME SCREEN 10. Selection of any of these hyperlinks may also cause the user to be re-directed to another screen within the system of the present invention, or even to a third-party Internet site.

20 As mentioned above, Figure 2 depicts the LOGIN SCREEN 20 for players. The buttons and tabs arrayed around the periphery of the central message window 14 are the same buttons 16 and tabs 18 that appear on the HOME SCREEN 10, as depicted in Figure 1. In the central message window 14 of the LOGIN SCREEN 20, there are multiple data entry fields 22. In this particular embodiment, there are two fields 22 in which a user can enter his User ID 22a and PASSWORD 22b.

Figure 29 is a flow chart depicting operation of the system with respect to this LOGIN SCREEN 20. As indicated at INPUT 430, a registered user can enter the various information into the data entry fields 22 using a conventional computer keyboard or similar peripheral device.

Once the requisite data is entered, the user can select the PLAYER LOGIN button 26 at

5 SELECTION 432 of Figure 29; this button 26 is located in the central message window 14 of the LOGIN SCREEN 20, as depicted in Figure 2. If the user has not previously registered with the system, the user can select the NEW USER REGISTRATION button 27 at SELECTION 434 of Figure 29; this button 27 is also located in the central message window 14 of the LOGIN

SCREEN 20, as depicted in Figure 2. A third button, the RETURN TO CSTAKES HOME button 28, is also located in the central message window 14 of the LOGIN SCREEN 20. A user can select this button 28 at any time at SELECTION 444 of Figure 29; a new advertising banner would be retrieved as indicated by RETRIEVE BANNER 446, and the user would be returned to the HOME SCREEN 10, as depicted in Figure 1. Finally, although not indicated in the flow chart of Figure 29, the LOGIN SCREEN 20 depicted in Figure 2 also includes a fourth button, the I THINK I WON A PRIZE! button 29, selection of this button 29 re-directing the user to a list of prize winners.

Returning to Figure 29, if the user does select the PLAYER LOGIN button 26 at SELECTION 432, the system first verifies that the login name and password entered in data entry fields 22a and 22b match records maintained in an integral USER DATABASE at

20 COMPARE/UPDATE 438, a new advertising banner would be retrieved as indicated by RETRIEVE BANNER 440, and the user would be returned to the prior screen, i.e. the HOME SCREEN 10, as depicted in Figure 1. Also, it is preferred that the USER DATABASE be

updated with record of the user's visit at COMPARE/UPDATE 438.

As mentioned in the preceding paragraph, the preferred system included an integral USER DATABASE. This USER DATABASE is the storage location for all data about users of the system, whether they be "players," "prize presenters," or "advertisers." The preferred system also includes and incorporates two additional databases: a PRIZE DATABASE and PROFILE DATABASE. All information and data about prizes offered through the sweepstakes component of the preferred system is stored and maintained in the PRIZE DATABASE. And, all information about advertising profiles, that is, all information that defines the target demographic profiles (as established by the advertisers) is stored and maintained in the PROFILE DATABASE. The architecture and design of these three databases is not essential to system of the present invention provided that the databases can meet the storage and retrieval requirements set forth herein. Various commercial software packages and/or programming techniques could be used by those skilled in the art to develop these databases without departing from the spirit and scope of the present invention.

In this description, for the sake of clarity, depictions of the USER DATABASE, PRIZE DATABASE, and PROFILE DATABASE are not included in the flow charts of Figures 29-53, although retrieval and update functions associated with these databases are appropriately shown and described with reference to Figure 29-53.

Referring still to Figure 29, if the user selects the NEW USER REGISTRATION button 27 at SELECTION 434, a new advertising banner would be retrieved as indicated by RETRIEVE BANNER 442, and the user would be re-directed to the DATA ENTRY SCREEN 30, as depicted in Figure 2A. In the central message window 14 of the DATA ENTRY SCREEN 30,

there are multiple data entry fields, indicated generally by reference numeral 32, that allow the user to input the requisite demographic information. In this particular embodiment, the following demographic information is requested:

Prefix
First Name
M.I. (Middle Initial)
Last Name
Suffix
Address
City
State
Zip/Postal Code
Phone
Email
User ID
Password
Age
Cars
Children
Education
Employment
Home
Income
Marital
Race
Sex
Student

TABLE 1

As shown in Figure 2A, some of this information is entered through a conventional computer keyboard or similar peripheral device, whereas other information (e.g., age, education) may be entered using a computer mouse or similar peripheral device to make a selection from a pull-down menu. Of course, either method of data entry may be used without departing from the

spirit and scope of the present invention. Additionally, the DATA ENTRY SCREEN 30 of this particular embodiment includes one or more check boxes 34 that allow a user to indicate particular interests, e.g., fashion, Internet, movies, politics, reading, religion, shopping, sports, and watching TV.. Once the user has entered all of the requisite data into the DATA ENTRY
5 SCREEN 30, selection of the SAVE button 36 causes this information to be stored in the integral USER DATABASE. The system then returns the user to the LOGIN SCREEN 20, as depicted in Figure 2. Of course, it is contemplated that standard programming and validation techniques be employed to ensure that all requisite data is properly entered and stored throughout the system of the present invention.

As mentioned above with reference to the HOME SCREEN 10 depicted in Figure 1, if the user would like to view available prizes or enter one or more of the sweepstakes, he could select the WIN PRIZES button 16b at SELECTION 406 of Figure 28. Alternatively, the user could select the PRIZES tab 18b at SELECTION 418 of Figure 28. In either event, a new advertising banner would be retrieved, and the user would be re-directed to the PRIZES
15 SCREEN 50, a sample of which is depicted in Figure 3. The PRIZES SCREEN 50 displays in the central message window 14 various categories of prizes that are being given away through the sweepstakes function of the system of the present invention. This information is maintained in an integral PRIZE DATABASE that is accessed when the PRIZES SCREEN 50 is displayed. On this particular sample screen, prizes are available in only two categories: the "Computers"
20 category, as indicated by reference numeral 52, and the "Cash" category, as indicated by reference numeral 54.

Figure 30 is a flow chart depicting operation of the system with respect to this PRIZES

SCREEN 50. As indicated by INPUT 460 of Figure 30, the system does nothing until the user makes a selection. As always, the user may select one of the buttons 16 or tabs 18 arrayed around the periphery of the central message window 14, or the user may select one of the prize categories in which prizes are available. In this example, the user can select "Computers" 52, "Cash" 54, or "Vehicles" 55 by clicking on the hypertext link or image associated with the selected prize category. Assuming for sake of example that the user selected the "Cash" category 54 at INPUT 460, a new advertising banner would be retrieved as indicated by RETRIEVE BANNER 462, and the user would be re-directed to a SAMPLE PRIZES SCREEN 56, as depicted in Figure 4.

Referring now to Figure 4, there are three prizes available in the "Cash" category, each of which is set forth in the central message window 14, along with information about the prizes, such as value of the prizes and hits needed prior to the sweepstakes. Again, prize information displayed in the central message window 14 is maintained in and retrieved from an integral PRIZE DATABASE that is accessed when the SAMPLE PRIZES SCREEN 56 is displayed. Of course, any number of prizes could be available and displayed without departing from the spirit and scope of the present invention.

With respect to each of these available prizes, the user has three options. If the user would like more information about a particular prize, he could select the VIEW DETAILS icon 58 associated with the prize at SELECTION 464 of Figure 30, which would trigger execution of the "PRIZE_INFO" subroutine at EXECUTE 466 of Figure 30. This subroutine will be described further below with reference to Figure 31. If the user would like to play for a particular prize, he could select the PLAY PRIZE icon 60 associated with the prize at SELECTION 468 of

Figure 30, which would trigger execution of the "PLAYER_MATCH" subroutine at EXECUTE 470, which will be described further below with reference to Figure 32. If the user would like to add a particular prize to his personal watch list, he could select the ADD TO LIST icon 62 associated with the prize at SELECTION 472 of Figure 30, which would trigger execution of the "PLAYER_PERS_LIST" subroutine at EXECUTE 474, which will be described further below with reference to Figure 33. Finally, at any time, a user can return to the PRIZES SCREEN 50 by selecting the GO BACK TO button 64 at SELECTION 476 of Figure 30; the GO BACK TO button 64 is also located in the central message window 14 of the SAMPLE PRIZES SCREEN 56, as depicted in Figure 4. A new advertising banner would be retrieved as indicated by RETRIEVE BANNER 478, and the user would be returned to the PRIZES SCREEN 50, as depicted in Figure 3.

Figure 31 is a flow chart depicting the operation and function of the "PRIZE_INFO" subroutine. The first step in this subroutine is the retrieval of a new advertising banner at RETRIEVE BANNER 480. A determination is then made at DECISION 482 as to whether the user has logged into the system. If not, the user is re-directed to the LOGIN SCREEN 20, as depicted in Figure 2. It is important to note that throughout the system of the present invention, it will be repeatedly verified that the user has logged into the system. Although this may be repetitive, such re-verification is a security measure.

If the user has already logged into the system, the PRIZE INFO SCREEN 66 is displayed for the particular prize selected, as depicted in Figure 5. Text and/or images associated with the selected prize, in this example – cash, are retrieved from the PRIZE DATABASE and displayed in the central message window 14 of the PRIZE INFO SCREEN 66. To return to the SAMPLE

PRIZES SCREEN 56, the user can select the GO BACK TO button 68 at SELECTION 484 of Figure 31; the GO BACK TO button 64 is also located in the central message window 14 of the PRIZE INFO SCREEN 66. A new advertising banner would be retrieved as indicated by RETRIEVE BANNER 486, and the user would be returned to the SAMPLE PRIZES SCREEN 56, as depicted in Figure 4.

Figure 32 is a flow chart depicting the operation and function of the "PLAYER_MATCH" subroutine. This subroutine performs the primary function of the system of the present invention. Specifically, this subroutine matches a user with a selected advertiser. The first step in this subroutine is the determination at DECISION 488 as to whether the user has logged into the system. If not, the user is re-directed to the LOGIN SCREEN 20, as depicted in Figure 2. If the user has already logged into the system, the system matches the user with a particular advertiser at OPERATION 490. In this regard, the system compares the user profile maintained in the integral USER DATABASE with the preferred or target demographic profiles as established by advertisers and maintained in the PROFILE DATABASE. The comparison is effectuated by comparing such data as sex, age, interests, etc. A user is a "perfect match" if he meets all the criteria of a certain target profile, e.g., a male, college-educated professional, 25-30 years old. If no perfect match is available, a user may be re-directed to an advertiser that is a close match, i.e., meets some but not all of the criteria of a particular target profile.

It is also possible that an individual user is within the targeted demographic population of more than one advertiser. In such a situation, the system must determine which advertiser the user is re-directed to. To make such a determination, it is contemplated that the system considers such factors as the status of the advertiser and/or the time that has elapsed since a re-direction to

a particular advertiser has occurred. For example, an advertiser may be willing to pay a premium to ensure that all individuals within a targeted demographic are first directed to their site rather than that of another advertiser. Or, perhaps two advertisers have the same status, but one user was directed to the first advertiser just a few minutes prior, so the next user would be directed to the second advertiser. Of course, various other criteria and factors could be considered in effectuating an appropriate match without departing from the spirit and scope of the present invention.

Once the appropriate match has been made, the databases are updated as indicated at UPDATE DATABASES 492 of Figure 32. Specifically, the USER DATABASE is updated with information that the particular registered user entered the sweepstakes for the prize; the PRIZE DATABASE is updated so as to lower the number of remaining hits required before the prize is given away; and the PROFILE DATABASE is updated reflect that a user was directed to a particular advertiser's site. Finally, as indicated at REDIRECT 494, the user is re-directed to the selected advertiser's web site, thus exiting the system of the present invention. It is further contemplated that rather than be re-directed to a new web site, a pop-up advertising window could be displayed without departing from the spirit and scope of the present invention.

Figure 33 is a flow chart depicting the operation and function of the "PLAYER_PERS_LIST" subroutine. The first step in this subroutine is the determination at DECISION 496 as to whether the user has logged into the system. If not, the user is re-directed to the LOGIN SCREEN 20, as depicted in Figure 2. If the user has already logged into the system, the system then determines at DECISION 498 whether the prize is currently on the user's personal watch list. In other words, is the prize is to be added to the user's list. If so, the logic

flow proceeds to UPDATE 500, and the USER DATABASE is updated so that the selected prize is associated with the user's profile. If not (i.e., the prize is already on the user's personal watch list), the logic flow proceeds to UPDATE 502, and the USER DATABASE is updated so that the selected prize is removed from the user's profile. Throughout the execution of this subroutine, the user remains at the SAMPLE PRIZES SCREEN 56.

Returning to HOME SCREEN 10 of Figure 1 and the associated flow chart of Figure 28, to view a personalized screen detailing information about the registered player, the player would select the MY CYBERSTAKES tab 18c at SELECTION 422, which would initiate the subroutine depicted in Figure 34. Referring now to Figure 34, a new advertising banner is retrieved at RETRIEVE BANNER 502. A determination is then made at DECISION 504 as to whether the user has logged into the system. If not, the user is re-directed to the LOGIN SCREEN 20, as depicted in Figure 2. If the user has already logged into the system, the MY CYBERSTAKES SCREEN 70 is displayed for the particular user, as depicted in Figure 6.

As shown in Figure 6, the MY CYBERSTAKES SCREEN 70 simply displays the various demographic information that was entered when the user first registered with the system, as described with reference to Figure 2A. From the MY CYBERSTAKES SCREEN 70, the user has the option of editing or revising any of this demographic information. Specifically, by selecting the YES hyperlink 72 in the central message window 14 at SELECTION 506 of Figure 34, the "PLAYER_PROF" subroutine is executed at EXECUTE 508 of Figure 35. Referring now to Figure 35, a new advertising banner is retrieved at RETRIEVE BANNER 510. Again, a determination is then made at DECISION 512 verifying that the user has properly logged into the system. If not, the user is returned to the LOGIN SCREEN 20, as depicted in Figure 2. If the

user has logged into the system, the MY PROFILE SCREEN 82 is displayed for the particular user, as depicted in Figure 7. The MY PROFILE SCREEN 82 is almost identical to the DATA ENTRY SCREEN 30 of Figure 2A, except that the information currently stored in the USER DATABASE is displayed in the appropriate data fields. Of course, the user can modify any or all of this information at INPUT CHANGES 514 of Figure 35, selecting the SAVE button 83 at SELECTION 516 of Figure 35 to update the information stored in the integral USER DATABASE at UPDATE 518. A new advertising banner is then retrieved at RETRIEVE BANNER 520 of Figure 25, and the system returns the user to the MY CYBERSTAKES SCREEN 70, as depicted in Figure 6.

Returning to Figure 6 and the associated flow chart of Figure 34, if the user does not wish to modify or revise any of the demographic information, he may select the NO hyperlink 74 in the central message window 14 at SELECTION 522, thereby returning the user to the HOME SCREEN 10, as depicted in Figure 1.

From the MY CYBERSTAKES SCREEN 70 of Figure 6, the user also has the option of viewing various personalized reports. Each of these reports can be displayed in the central message window 14 by selecting the appropriate hyperlink. To view a report detailing the user's sweepstakes entries, the user can select the SWEEPSTAKES ENTRIES hyperlink 76 at SELECTION 524 of Figure 34, which causes the execution of the "SWEEPSTAKES_ENTRY" subroutine at EXECUTE 526. To view a report detailing the prizes a particular user has won, he can select the HAVE I WON A PRIZE? hyperlink 80 at SELECTION 528 of Figure 34, which causes the execution of the "HAVE_I_WON" subroutine at EXECUTE 530. Finally, to view a report summarizing the web sites that the individual user has been re-directed to, he can select

the VISIT SUMMARY REPORT hyperlink 80 at SELECTION 532 of Figure 34, which causes the execution of the "PLAYER_VISIT_SUMMARY" subroutine at EXECUTE 534.

Figure 36 depicts the operation and function of the "SWEEPSTAKES_ENTRY" subroutine described above. Specifically, the subroutine first retrieves a new advertising banner at RETRIEVE BANNER 536. The second step in the subroutine is the determination at DECISION 538 as to whether the user has logged into the system. If not, the user is re-directed to the LOGIN SCREEN 20, as depicted in Figure 2. If the user has already logged into the system, the system then retrieves the report data from the integral USER DATABASE at RETRIEVE DATA 540, displaying said data in the central message window 14 of the ENTRIES SCREEN 84 of Figure 8. Again, this report details the user's sweepstakes entries, specifically providing information related to the date and ticket number of each entry. Thus, the report allows the user to verify that all entries have been appropriately recorded.

Figure 37 depicts the operation and function of the "HAVE_I_WON" subroutine described above. Specifically, the subroutine first retrieves a new advertising banner at RETRIEVE BANNER 542. The second step in the subroutine is the determination at DECISION 544 as to whether the user has logged into the system. If not, the user is re-directed to the LOGIN SCREEN 20, as depicted in Figure 2. If the user has already logged into the system, the system then retrieves the report data from the integral USER DATABASE at RETRIEVE DATA 546, displaying said data in the central message window 14 of the HAVE I WON SCREEN 86 of Figure 9. Again, this report details the prizes a particular user has won. Although not shown in Figure 9, it is contemplated that the report data might also included information about who won other sweepstakes that the user had entered.

Figure 38 depicts the operation and function of the "PLAYER_VISIT_SUMMARY" subroutine described above. Specifically, the subroutine first retrieves a new advertising banner at RETRIEVE BANNER 548. The second step in the subroutine is the determination at DECISION 550 as to whether the user has logged into the system. If not, the user is re-directed to the LOGIN SCREEN 20, as depicted in Figure 2. If the user has already logged into the system, the system then retrieves the report data from the integral USER DATABASE at RETRIEVE DATA 552, displaying said data in the central message window 14 of the SUMMARY SCREEN 88 of Figure 10.

Figure 39 depicts the operation and function of the subroutine initiated by selection of the MY WISH LIST tab 18d, as discussed with reference to Figure 1 and the associated flow chart of Figure 28. The subroutine first retrieves a new advertising banner at RETRIEVE BANNER 554. The second step in the subroutine is the determination at DECISION 556 as to whether the user has logged into the system. If not, the user is re-directed to the LOGIN SCREEN 20, as depicted in Figure 2. If the user has already logged into the system, the MY WISH LIST SCREEN 90 is displayed for the particular user, as depicted in Figure 11. The MY WISH LIST SCREEN 90 displays in the central message window 14 those prizes on the user's personal watch list, record of which is maintained in the integral USER DATABASE, as described above with reference to the "PLAYER_PERS_LIST" subroutine of Figure 33. Included with the listing of prizes is the value of each prize and the number of hits necessary before a sweepstakes for that prize will be conducted.

Similar to the options available with respect to the SAMPLE PRIZE SCREEN 56 of Figure 4, the user has three options on the MY WISH LIST SCREEN 90. If the user would like

more information about a particular prize, he could select the VIEW DETAILS icon 58 associated with the prize at SELECTION 558 of Figure 39, which would trigger execution of the "PRIZE_INFO" subroutine at EXECUTE 560 of Figure 39. This subroutine was described above with reference to Figure 31. If the user would like more play for a particular prize, he could select the PLAY PRIZE icon 60 associated with the prize at SELECTION 562 of Figure 39, which would trigger execution of the "PLAYER_MATCH" subroutine at EXECUTE 564. This subroutine was described above with reference to Figure 32. If the user would like to remove a particular prize from his personal watch list, he could select the DROP icon 63 associated with the prize at SELECTION 566 of Figure 30, which would trigger execution of the "PLAYER_PERS_LIST" subroutine at EXECUTE 568. This subroutine was described above with reference to Figure 33.

Finally, in relation to "player" options, as discussed above, by selecting the HOW TO PLAY tab 18e, the user can view instructions on how to play, that is, instructions on how the preferred system works. Figure 12 depicts a preferred HOW TO PLAY SCREEN 92. Various hyperlinks are displayed in the central message window 14 of the HOW TO PLAY SCREEN 92, including a "How Playing Works" 94 hyperlink, a "General Rules" 96 hyperlink, and a "Winners" hyperlink 98. Selection of each of these hyperlinks directs the user to further information about the preferred system. For example, selection of the "How Playing Works" 94 hyperlink directs the user to the screen depicted in Figure 12A, said screen including a detailed written description of the system works in the central message window 14. Selection of the "General Rules" 96 hyperlink directs the user to the screen depicted in Figure 12B, said screen including detailed written rules in the central message window 14. Selection of the "Winners"

hyperlink 98 directs the user to the screen depicted in Figure 12C, said screen including a list of winners in the central message window 14.

Figure 13 depicts the PRESENTING HOME SCREEN 100 of the preferred system. As described above, the PRESENTING HOME SCREEN 100 is accessed through the selection of the PRESENT A PRIZE button 16c, as described with reference to Figure 1 and the associated flow chart of Figure 28.

As with all screens of the preferred system, the PRESENTING HOME SCREEN 100 includes a banner advertisement location 12 that appears at the top of the screen 100 and a central message window 14. As shown in Figure 13, various text messages, images, and/or hyperlinks can be displayed in this window 14 conveying information to the user about the system. Similar to the “player” screens described above, along the periphery of this window 14 are a series of buttons 16 and a series of tabs 102. The four buttons arrayed along the central message window 14 are identical to those described above with reference to the “player” screens: a LOGIN button 16a, a WIN PRIZES button 16b, a PRESENT A PRIZE button 16c, and an ADVERTISE WITH US button 16d. Indeed, as noted above, these four buttons do appear on each and every screen of the preferred system.

In this preferred system, there are also three tabs 102 arrayed along the top of the central message window 14: a PRESENTING HOME tab 102a, a PRIZE REGISTRATION tab 102b, and a HOW TO PRESENT tab 102c. These tabs 102 are different than those described above with reference to the “player” screens but, although these tabs 102 are not particularly pointed out with reference to all of the screens described below, these three tabs do appear on each and every “prize presenter” screen of the preferred system.

Figure 40 is a flow chart depicting navigation through and operation of the system, beginning from the PRESENTING HOME SCREEN 100. For a user to continue through the system, one of the buttons 16 or tabs 102 must be clicked or otherwise selected by the user.

If a user is a registered user of the system or wishes to become one, he would select the LOGIN button 16a, as indicated at SELECTION 600 of Figure 40. A new advertising banner would be retrieved as indicated by RETRIEVE BANNER 602, and the user would be re-directed to the LOGIN SCREEN 104, as depicted in Figure 14 and which will be more fully described below.

If the user would like to view available prizes or enter one or more of the sweepstakes, he would select the WIN PRIZES button 16b at SELECTION 604. Again, a new advertising banner would be retrieved as indicated by RETRIEVE BANNER 606, and the user would be re-directed to the PRIZES SCREEN 50, as depicted in Figure 3.

If the user is a prize presenter or wishes to become one, he would select the PRESENT A PRIZE button 16c at SELECTION 608. Again, a new advertising banner would be retrieved as indicated by RETRIEVE BANNER 610. However, since the user is already at the PRESENTING HOME SCREEN 100, he would simply be returned to the same page. Therefore, it is contemplated the PRESENT A PRIZE button 16c not be available as a selection on the PRESENTING HOME SCREEN 100.

Finally, if the user is an advertiser or wishes to become one, he would select the ADVERTISE WITH US button 16d at SELECTION 612. Again, a new advertising banner would be retrieved as indicated by RETRIEVE BANNER 614, and the user would be re-directed to the ADVERTISING HOME screen 170, as depicted in Figure 21 and which will be more fully

described below.

As mentioned above, the tabs 102 included on the PRESENTING HOME SCREEN 100 are "presenter" tabs in that they are designed for a user that will be registering prizes for "sale" through the sweepstakes.

5 Referring still to Figure 40 and the tabs 102 shown in Figure 13, if a user wishes to register a prize for sale through the sweepstakes, he would select the PRIZE REGISTRATION tab 102b at SELECTION 616, which would initiate the subroutine depicted in Figure 42 as will be more fully described below.

0 09525660-072600
10 Finally, to view instructions on how to present prizes, that is, instructions on how the preferred system works, the user would select the HOW TO PRESENT tab 102c at SELECTION 618. A new advertising banner would be retrieved as indicated by RETRIEVE BANNER 620, and the user would be re-directed to the HOW TO PRESENT screen 152, as depicted in Figure 20 and which will be more fully described below.

15 As mentioned above, Figure 14 depicts the LOGIN SCREEN 104 for prize presenters. The buttons and tabs arrayed around the periphery of the central message window 14 are the same buttons 16 and tabs 102 that appear on the PRESENTING HOME SCREEN 100, as depicted in Figure 13. In the central message window 14, there are multiple data entry fields 106. In this particular embodiment, there are two fields 106 in which a user can enter his USER ID 106a and PASSWORD 106b. There is also a NEW USER? box 108 which a user can select
20 to indicate that he is a new user. Figure 41 is a flow chart depicting operation of the system with respect to this LOGIN SCREEN 104. As indicated at INPUT 622, a user enters the various information into the data entry fields using a conventional computer keyboard or similar

peripheral device. Once the requisite data is entered, the user can select the PRIZE PRESENTER LOGIN button 110 at SELECTION 624 of Figure 41; this button 110 is located in the central message window 14 of the LOGIN SCREEN 104, as depicted in Figure 14. Once the user selects the PRIZE PRESENTER LOGIN button 110, the system then makes a determination at DECISION 626 as to whether the user is a "new" user. If not, provided that the user ID and password entered in data entry fields 106a and 106b match records maintained in an integral USER DATABASE at COMPARE/UPDATE 628, a new advertising banner would be retrieved as indicated by RETRIEVE BANNER 630, and the user would be returned to the prior screen, i.e. the PRESENTING HOME SCREEN 110, as depicted in Figure 13. Also, it is preferred that the USER DATABASE be updated with record of the user's visit at COMPARE/UPDATE 628.

If the user is a "new" user, as determined at DECISION 626, a new advertising banner would be retrieved as indicated by RETRIEVE BANNER 632, and the user would be re-directed to the DATA ENTRY SCREEN 112, as depicted in Figure 14A. In the central message window 14 of the DATA ENTRY SCREEN 112, there are multiple data entry fields, indicated generally by reference numeral 114, that allow the user to input the requisite information. In this particular embodiment, the following information is requested:

First Name
M.I. (Middle Initial)
Last Name
Address 1
Address 2
City
State
Zip
Phone
Email

User ID
Password

TABLE 2

It is contemplated and preferred that this information be entered through a conventional computer keyboard or similar peripheral device. Although not depicted in flow chart form, once the user has entered all of the requisite data into the DATA ENTRY SCREEN 112, selection of the SAVE CHANGES button 116 causes this information to be stored in the integral USER DATABASE. The system then returns the user to the LOGIN SCREEN 104, as depicted in Figure 14.

As set forth above, the second tab is the PRIZE REGISTRATION tab 102b which is selected when a user wishes to register a prize for sale through the sweepstakes. Selection of this tab 102 initiates the subroutine depicted in Figure 42. As shown in Figure 42, the subroutine first retrieves a new advertising banner at RETRIEVE BANNER 632. The second step in the subroutine is the determination at DECISION 634 as to whether the user has logged into the system. If not, the user is re-directed to the LOGIN SCREEN 104, as depicted in Figure 14. If the user has already logged into the system, the PRIZE REGISTRATION SCREEN 120 is displayed for the particular user, as depicted in Figure 15. The PRIZE REGISTRATION SCREEN 120 displays in the central message window 14 the various identifying information that was entered when the user first registered with the system and which is maintained in the integral USER DATABASE, as described with reference to Figure 14A. From the PRIZE REGISTRATION SCREEN 120, the user has the option of editing or revising any of this identifying information. Specifically, by selecting the YES hyperlink 122 in the central message

window 14 at SELECTION 636 of Figure 42, the "UPDATE_USER" subroutine is executed at EXECUTE 638 of Figure 42. This subroutine will be described further below with reference to Figure 46.

The PRIZE REGISTRATION SCREEN 120 also displays in the central message window 14 a listing of those prizes the user has previously registered to be given away through a sweepstakes, records of which are maintained and retrieved from the integral PRIZE DATABASE. If the user would like to review or edit the information associated with one of these prizes, he would select the VIEW icon 124 associated with the prize at SELECTION 640 of Figure 42, which would trigger execution of the "PRIZE_EDIT" subroutine at EXECUTE 642 of Figure 42. This subroutine will be described further below with reference to Figure 43. Also, the user has the option of adding a new prize to be "sold" through a sweepstakes. Specifically, by selecting the ADD AS NEW icon 126 at SELECTION 644 of Figure 42, the user triggers execution of the "ADD_PRIZE" subroutine at EXECUTE 646 of Figure 42. This subroutine will be described further below with reference to Figure 44.

Figure 43 depicts the operation and function of the "PRIZE_EDIT" subroutine described above. Specifically, the subroutine first retrieves a new advertising banner at RETRIEVE BANNER 648. The second step in the subroutine is the determination at DECISION 650 as to whether the user has logged into the system. If not, the user is re-directed to the LOGIN SCREEN 104, as depicted in Figure 14. If the user has already logged into the system, the PRIZE INFO SCREEN 128 is displayed for the particular prize, as depicted in Figure 16.

As shown in Figure 16, and as with the PRIZE REGISTRATION SCREEN 120, the PRIZE INFO SCREEN 128 displays in the central message window 14 the various identifying

information that was entered when the user first registered with the system. Additionally, the PRIZE INFO SCREEN 128 displays in the central message window 14 specific information about the prize selected, retrieving such information from the integral PRIZE DATABASE. In this case, there are data fields 130 for Prize Category 130a, Prize Value 130b, Prize Description 130c, Long Prize Description 130d, and Sale Price 130e. The user can change one or more of the entries in these data fields using a conventional computer keyboard, a mouse, or a similar peripheral device at INPUT 652 of Figure 43. Once such changes have been made, selection of the SAVE CHANGES button 132 at SELECTION 654 of Figure 43 causes the revised information to be stored in the integral PRIZES DATABASE at UPDATE 656 of Figure 43. A new advertising banner is retrieved at RETRIEVE BANNER 658. The system then returns the user to the PRIZE REGISTRATION SCREEN 120, as depicted in Figure 15.

There is one additional option available to the user available on the PRIZE INFO SCREEN 128 depicted in Figure 16, an option to provide payment for the prize to a third party. This option will be fully described with reference to the "ADD_PRIZE" subroutine of Figure 44 and the associated ADD PRIZE SCREEN 134 depicted in Figure 17.

Figure 44 depicts the operation and function of the "ADD_PRIZE" subroutine described above. Specifically, the subroutine first retrieves a new advertising banner at RETRIEVE BANNER 660. The second step in the subroutine is the determination at DECISION 662 as to whether the user has logged into the system. If not, the user is re-directed to the LOGIN SCREEN 104, as depicted in Figure 14. If the user has already logged into the system, the ADD PRIZE SCREEN 134 is displayed, as depicted in Figure 17.

As shown in Figure 17, the ADD PRIZE SCREEN 134 is almost identical to the PRIZE

INFO SCREEN 128 depicted in Figure 16. More specifically, the ADD PRIZE SCREEN 134 also displays in the central message window 14 the various identifying information that was entered when the user first registered with the system. Additionally, the ADD PRIZE SCREEN 134 displays in the central message window 14 empty data fields 136 in which information about the prize to be offered may be entered, including: Prize Category 136a, Prize Value 136b, Prize Description 136c, Long Prize Description 130d, and Sale Price 130e. Of course, the descriptions have no effect other than to communicate to players information about the prizes to be given away; however, the price entered into the Sale Price data field 130e is extremely important as it determines the number of hits required before the prize is given away. Once the appropriate information has been entered at INPUT 664 of Figure 44, selection of the SAVE CHANGES button 138 at SELECTION 666 of Figure 44 causes the new information to be stored in the integral PRIZES DATABASE at UPDATE 668 of Figure 44. A new advertising banner is retrieved at RETRIEVE BANNER 670, and then the system returns the user to the PRIZE REGISTRATION SCREEN 120, as depicted in Figure 15.

There is one additional option available to the user available on the ADD PRIZE SCREEN 134 depicted in Figure 17, an option to provide payment for the prize to a third party, such as a charitable organization. Specifically, by selecting the YES hyperlink 140 in the central message window 14 at SELECTION 672 of Figure 44, a subroutine is initiated, as depicted in Figure 45.

Referring now to Figure 45, the subroutine first retrieves a new advertising banner at RETRIEVE BANNER 672. The second step in the subroutine is the determination at DECISION 674 as to whether the user has logged into the system. If not, the user is re-directed

to the LOGIN SCREEN 104, as depicted in Figure 14. If the user has already logged into the system, the DATA ENTRY SCREEN 142 is displayed, as depicted in Figure 18. In the central message window 14 of the DATA ENTRY SCREEN 142, there are multiple data entry fields, indicated generally by reference numeral 144, that allow the user to input the requisite identifying information. In this particular embodiment, the following information is requested:

Organization
Contact First Name
Contact Last Name
Address 1
Address 2
City
State
Zip
Phone
Email

TABLE 3

It is contemplated and preferred that this information be entered through a conventional computer keyboard or similar peripheral device. Once the user has entered all of the requisite data into the DATA ENTRY SCREEN 142 at INPUT 676 of Figure 44, selection of the SAVE CHANGES button 143 at SELECTION 678 of Figure 44 causes this information to be stored in the integral PRIZE DATABASE at UPDATE 680 along with the information about the prize with which the third party is associated. A new advertising banner is retrieved at RETRIEVE BANNER 682, and then the system returns the user to the PRIZE REGISTRATION SCREEN 120, as depicted in Figure 15. Although not indicated in the flow chart of Figure 44, selection of the DO NOT PAY ANOTHER button 145 returns the user to the ADD PRIZE SCREEN of

Figure 17.

Figure 46 depicts the operation and function of the "UPDATE_USER" subroutine described above. Specifically, the subroutine first retrieves a new advertising banner at RETRIEVE BANNER 684. The second step in the subroutine is the determination at
5 DECISION 686 as to whether the user has logged into the system. If not, the user is re-directed to the LOGIN SCREEN 104, as depicted in Figure 14. If the user has already logged into the system, the UPDATE SCREEN 146 is displayed for the particular user, as depicted in Figure 19.

The UPDATE SCREEN 146 depicted in Figure 19 is substantially identical as the LOGIN SCREEN 104 of Figure 14A, except that the information currently stored in the USER
10 DATABASE is displayed in the appropriate data fields. Of course, the user can modify any or all of this information at INPUT 688 of Figure 46, selecting the SAVE CHANGES button 148 at SELECTION 690 of Figure 46 to update the information stored in the integral USER DATABASE at UPDATE 692. A new advertising banner is then retrieved at RETRIEVE BANNER 694 of Figure 46, and then the system returns the user to the PRIZE REGISTRATION
15 SCREEN 120, as depicted in Figure 15.

It is also important to note that the UPDATE SCREEN 146 also displays in the central message window 14 a listing of those prizes the user has previously registered to be given away through a sweepstakes, records of which are maintained and retrieved from the integral PRIZE DATABASE. As with the PRIZE INFORMATION SCREEN 120 depicted in Figure 15, if the
20 user would like to review or edit the information associated with one of these prizes, he could select the VIEW icon 124 associated with the prize would trigger execution of the "PRIZE_EDIT" subroutine as described with reference to Figure 43.

Finally, in relation to “prize presenter” options, as discussed above, by selecting the HOW TO PRESENT tab 102c, the user can view instructions on how to present prizes, that is, instructions on how the preferred system works. Figure 20 depicts a preferred HOW TO PRESENT SCREEN 152. Various hyperlinks are displayed in the central message window 14 of the HOW TO PRESENT SCREEN 152, including, for example, a “How Presenting a Prize Works” 154 hyperlink. Selection of the “How Presenting a Prize Works” 154 hyperlink directs the user to further information about the preferred system, specifically to the screen depicted in Figure 20A. As shown in Figure 20A, the central message window 14 of this screen includes a detailed written description of the system works

Figure 21 depicts the ADVERTISING HOME SCREEN 170 of the preferred system. As described above, the ADVERTISING HOME SCREEN 170 is accessed through the selection of the ADVERTISE WITH US button 16c, as described with reference to Figure 1 and the associated flow chart of Figure 28.

As with all screens of the preferred system, the ADVERTISING HOME SCREEN 170 includes a banner advertisement location 12 that appears at the top of the screen 170 and a central message window 14. In this particular embodiment shown in Figure 21, various text messages, images, and/or hyperlinks can be displayed in this window 14 conveying information to the user about the system. Similar to the “player” and “prize presenter” screens described above, along the periphery of this window 14 are a series of buttons 16 and a series of tabs 172. The four buttons arrayed along the central message window 14 are identical to those described above with reference to the “player” and “prize presenter” screens: a LOGIN button 16a, a WIN PRIZES button 16b, a PRESENT A PRIZE button 16c, and an ADVERTISE WITH US button 16d.

Indeed, as noted above, these four buttons do appear on each and every screen of the preferred system.

In this preferred system, there are also four tabs arrayed along the top of the central message window 14: an ADVERTISING HOME tab 172a, a PROFILES tab 172b, an INVOICES tab 172c, and a HOW TO ADVERTISE tab 172d. These tabs are different than those described above with reference to the “player” and the “prize presenter” screens but, although these tabs 172 are not particularly pointed out with reference to all of the screens described below, these three tabs do appear on each and every “advertiser” screen of the preferred system.

Figure 47 is a flow chart depicting navigation through and operation of the system, beginning from the ADVERTISING HOME SCREEN 170. For a user to continue through the system, one of the buttons 16 or tabs 172 must be clicked or otherwise selected by the user.

If a user is a registered user of the system or wishes to become one, he would select the LOGIN button 16a, as indicated at SELECTION 700 in Figure 47. A new advertising banner would be retrieved as indicated by RETRIEVE BANNER 702, and the user would be re-directed to the LOGIN SCREEN 174, as depicted in Figure 22 and which will be more fully described below.

If the user would like to view available prizes or enter one or more of the sweepstakes, he would select the WIN PRIZES button 16b at SELECTION 704. Again, a new advertising banner would be retrieved as indicated by RETRIEVE BANNER 706, and the user would be re-directed to the PRIZES SCREEN 50, as depicted in Figure 3.

If the user is a prize presenter, he would select the PRESENT A PRIZE button 16c at

SELECTION 708. Again, a new advertising banner would be retrieved as indicated by RETRIEVE BANNER 710, and the user would be re-directed to the PRESENTING HOME SCREEN 100, as depicted in Figure 13.

Finally, in relation to the buttons 16, if the user is an advertiser, he would select the ADVERTISE WITH US button 16d at SELECTION 712. Again, a new advertising banner would be retrieved as indicated by RETRIEVE BANNER 714. However, since the user is already at the ADVERTISING HOME SCREEN 170, he would simply be returned to the same page. Therefore, it is contemplated the ADVERTISE WITH US button 16d not be available as a selection on the ADVERTISING HOME SCREEN 170.

As mentioned above, the tabs 172 included on the ADVERTISING HOME SCREEN 170 are "advertiser" tabs in that they are designed for advertisers that will be registering with the system and to whom players will be re-directed.

Referring still to Figure 47 and the tabs 172 shown in Figure 21, if a user wishes to view target profiles that have been previously registered with the system, he would select the PROFILES tab 172b at SELECTION 716, which would initiate the subroutine depicted in Figure 49 as will be more fully described below.

If a user wishes to view invoices associated with the number of re-directions to the advertiser's web site, he would select the INVOICES tab 172c at SELECTION 718, which would initiate the subroutine depicted in Figure 53 as will be more fully described below.

Finally, to view instructions on how to advertise, that is, instructions on how the preferred system works, the user would select the HOW TO ADVERTISE tab 172d at SELECTION 720. A new advertising banner would be retrieved as indicated by RETRIEVE BANNER 722, and the

user would be re-directed to the HOW TO ADVERTISE screen 230, as depicted in Figure 27 and which will be more fully described below.

As mentioned above, Figure 22 depicts the LOGIN SCREEN 174 for advertisers. The buttons and tabs arrayed around the periphery of the central message window 14 are the same buttons 16 and tabs 172 that appear on the ADVERTISING HOME SCREEN 170, as depicted in Figure 20. In the central message window 14, there are multiple data entry fields 176. In this particular embodiment, there are two fields 176 in which a user can enter his USER ID 176a and PASSWORD 176b. Figure 48 is a flow chart depicting operation of the system with respect to this LOGIN SCREEN 174. As indicated at INPUT 724, a user enters the various information into the data entry fields using a conventional computer keyboard or similar peripheral device. Once the requisite data is entered, the user can select the CUSTOMER LOGIN button 178 at SELECTION 726 of Figure 41; this button 178 is located in the central message window 14 of the LOGIN SCREEN 174, as depicted in Figure 22. Provided that the user ID and password entered in data entry fields 176a and 176b match records maintained in the integral USER DATABASE 728 at COMPARE/UPDATE 728, a new advertising banner would be retrieved as indicated by RETRIEVE BANNER 730, and the user would be returned to the prior screen, i.e. the ADVERTISING HOME SCREEN 110, as depicted in Figure 21. Also, it is preferred that the USER DATABASE be updated with record of the user's visit at COMPARE/UPDATE 728.

It is important to note that although the preferred system described herein contains no means through a new advertiser can register on-line; however, such means could be provided without departing from the spirit and scope of the present invention.

Figure 49 depicts the operation and function of the subroutine initiated by selection of the

PROFILES tab 172b, as discussed with reference to Figure 21 and the associated flow chart of Figure 47. The subroutine first retrieves a new advertising banner at RETRIEVE BANNER 732.

The second step in the subroutine is the determination at DECISION 734 as to whether the user has logged into the system. If not, the user is re-directed to the LOGIN SCREEN 174, as

5 depicted in Figure 22. If the user has already logged into the system, the PROFILES SCREEN 180 is displayed for the particular user, as depicted in Figure 23. The PROFILES SCREEN 180 displays in the central message window 14 the various identifying information about the advertiser. From the PROFILES SCREEN 180, the user has the option of editing or revising any of this identifying information. Specifically, by selecting the YES hyperlink 182 in the central message window 14 at SELECTION 736 of Figure 49, the "UPDATE_COMPANY" subroutine is executed at EXECUTE 738 of Figure 49. This subroutine will be described further below with reference to Figure 52.

10
15
20 The PROFILES SCREEN 180 also displays in the central message window 14 a listing of those target profiles that have been established by the advertiser, along with the date of the last update of each of these profiles, records of the profiles being maintained and retrieved from the integral PROFILE DATABASE. If the user would like to review or edit the information associated with one of these prizes, he would select the VIEW icon 184 associated with the profile at SELECTION 740 of Figure 49, which would trigger execution of the "PROFILE_EDIT" subroutine at EXECUTE 742 of Figure 49. This subroutine will be described further below with reference to Figure 50. Also, the user has the option of adding a new target profile. Specifically, by selecting the ADD AS NEW icon 186 at SELECTION 744 of Figure 49, the user triggers execution of the "ADD_PROFILE" subroutine at EXECUTE 746 of Figure 49.

This subroutine will be described further below with reference to Figure 51.

Figure 53 depicts the operation and function of the subroutine initiated by selection of the INVOICES tab 172c, as discussed with reference to Figure 21 and the associated flow chart of Figure 47. The subroutine first retrieves a new advertising banner at RETRIEVE BANNER 800.

5 The second step in the subroutine is the determination at DECISION 802 as to whether the user has logged into the system. If not, the user is re-directed to the LOGIN SCREEN 174, as depicted in Figure 22. If the user has already logged into the system, the INVOICES SCREEN 240 is displayed for the particular user, as depicted in Figure 54.

Referring now to Figure 54, the INVOICES SCREEN 240 displays in the central message
10 window 14 the various identifying information about the advertiser. Although not indicated in the associated flow chart of Figure 53, as with the PROFILES SCREEN, from the INVOICES SCREEN 240, the user has the option of editing or revising any of this identifying information by selecting the YES hyperlink 242 in the central message window 14. This causes the execution of the "UPDATE_COMPANY" subroutine as is described above with reference to Figure 52.

15 The INVOICES SCREEN 240 also displays in the central message window 14 a listing of reports the user can select to view, specifically an Invoice Report, a Visit Summary Report, and a Visit Detail Report. To view the Invoices Report, the user can select the "Invoices" hyperlink 244 at SELECTION 804 of Figure 53, and the INVOICES REPORT SCREEN 250 is displayed, as depicted in Figure 55. To view the Visit Summary Report, the user can select the "Visit
20 Summary Report" hyperlink 246 at SELECTION 806 of Figure 53, and the VISIT SUMMARY SCREEN 270 is displayed, as depicted in Figure 56. Finally, to view the Visit Detail Report, the user can select the "Visit Detail Report" hyperlink 248 at SELECTION 808 of Figure 53, and the

VISIT DETAIL SCREEN 280 is displayed, as depicted in Figure 57.

Figure 55 depicts the INVOICES REPORT SCREEN 250. As with all of the invoice-related screens, the INVOICES REPORT SCREEN displays in the central message window 14 the various identifying information about the advertiser. More importantly, the INVOICES
5 REPORT SCREEN 250 also displays in the central message window 14 a listing of current invoices. By selection the appropriate hypertext link 252, the user can view a specific invoice; an example of such a INVOICE 260 is depicted in Figure 55A.

Figure 56 depicts the VISIT SUMMARY SCREEN 270. The primary purpose of the VISIT SUMMARY SCREEN 270 is to provide in the central message window 14 a summary of
10 the hits, or re-directions, that have been performed with respect to each of the advertiser's profile.

Figure 57 depicts the VISIT DETAIL SCREEN 280. The primary purpose of the VISIT
DETAIL SCREEN 280 is to provide in the central message window 14 a detailed listing of all hits, or re-directions, that have been performed with respect to each of the advertiser's profiles.
15 In this regard, the advertiser can see on what dates and at what time re-directions were performed, information that the advertiser can verify through a review of its web site statistical data.

Figure 50 depicts the operation and function of the "PROFILE_EDIT" subroutine described above. Specifically, the subroutine first retrieves a new advertising banner at
20 RETRIEVE BANNER 748. The second step in the subroutine is the determination at DECISION 750 as to whether the user has logged into the system. If not, the user is re-directed to the LOGIN SCREEN 174, as depicted in Figure 22. If the user has already logged into the

system, the PROFILE INFO SCREEN 188 is displayed for the particular profile, as depicted in Figure 24.

As shown in Figure 24, the PROFILE INFO SCREEN 188 displays in the central message window 14 the various identifying information about the advertiser. Although not indicated in the flow chart of Figure 50, the user again has the option of editing or revising any of this identifying information. Specifically, by selecting the YES hyperlink 189 in the central message window 14, the "UPDATE_COMPANY" subroutine is executed as will be described further below with reference to Figure 52.

More importantly, the PROFILE INFO SCREEN 188 displays in the central message window 14 specific information about the profile selected, retrieving such information from the integral PROFILE DATABASE. In this case, there are data fields 190 for Profile Name 190a, URL (for re-direction) 190b, and Hit Limit 190c. Of course, the "Profile Name" is simply a descriptor that identifies the profile to the advertiser and has no real effect in the system. However, the URL is important because it identifies the web site to which a player will be re-directed if he matches the target profile. And, the "Hit Limit" is simply a statement by the advertiser as to which how much he is willing to pay each month. In this example, the advertiser will pay for the first 500 "hits" of the month.

Additionally, there are pull-down menus 192 that allow a user to define the target demographic. In this case, there are pull-down menus 192 associated with Age 192a, Cars 192b, Children 192c, Education 192d, Employment 192e, Home 192f, Income 192g, Marital 192h, Race 192i, Sex 192j, and Student 192k. Of course, other menus could be included for establishing additional criteria that define the target demographic without departing from the

spirit and scope of the present invention.

The user can change one or more of the entries in these data fields using a conventional computer keyboard, a mouse, or a similar peripheral device at INPUT 752 of Figure 50. Once such changes have been made, selection of the SAVE CHANGES button 199 at SELECTION 5 754 of Figure 50 causes the revised information to be stored in the integral PROFILE DATABASE at UPDATE 756 of Figure 50. A new advertising banner is retrieved at RETRIEVE BANNER 758. The system then returns the user to the PROFILES SCREEN 180, as depicted in Figure 23.

Returning again to Figure 24, the PROFILE INFO SCREEN 188 further preferably 10 displays information about the current "Hit Count" 194, the negotiated "Hit Price" 196, and the date of the "Last Update" 198.

Figure 51 depicts the operation and function of the "ADD_PROFILE" subroutine described above. Specifically, the subroutine first retrieves a new advertising banner at RETRIEVE BANNER 760. The second step in the subroutine is the determination at 15 DECISION 762 as to whether the user has logged into the system. If not, the user is re-directed to the LOGIN SCREEN 174, as depicted in Figure 22. If the user has already logged into the system, the ADD PROFILE SCREEN 200 is displayed, as depicted in Figure 25.

As shown in Figure 25, the ADD PROFILE SCREEN 200 is almost identical to the PROFILE INFO SCREEN 188 depicted in Figure 24. More specifically, the ADD PROFILE 20 SCREEN 188 also displays in the central message window 14 the various identifying information about the advertiser. Additionally, the ADD PROFILE SCREEN 200 displays in the central message window 14 empty data fields 200 in which information about the profile can be entered,

including: the Profile Name 202a, URL (for re-direction) 202b, and Hit Limit 202c, each of which was described above. Additionally, there are pull-down menus 204 that allow a user to define the target demographic. In this case, there are pull-down menus 204 associated with Age 204a, Cars 204b, Children 204c, Education 204d, Employment 204e, Home 204f, Income 204g, 5 Marital 204h, Race 204i, Sex 204j, and Student 204k. Of course, other menus could be included for establishing additional criteria that define the target demographic without departing from the spirit and scope of the present invention.

The user enters the requisite information in these various data fields using a conventional computer keyboard, a mouse, or a similar peripheral device at INPUT 764 of Figure 51. Once all 10 requisite information has been entered, selection of the SAVE CHANGES button 205 at SELECTION 766 of Figure 51 causes the new information to be stored in the integral PROFILE DATABASE at UPDATE 768 of Figure 51. A new advertising banner is retrieved at RETRIEVE BANNER 770. The system then returns the user to the PROFILES SCREEN 180, as depicted in Figure 23.

15 Figure 52 depicts the operation and function of the "UPDATE_COMPANY" subroutine described above. Specifically, the subroutine first retrieves a new advertising banner at RETRIEVE BANNER 772. The second step in the subroutine is the determination at DECISION 774 as to whether the user has logged into the system. If not, the user is re-directed to the LOGIN SCREEN 174, as depicted in Figure 22. If the user has already logged into the 20 system, the UPDATE SCREEN 200 is displayed, as depicted in Figure 26.

In the central message window 14 of the UPDATE SCREEN 112, there are multiple data entry fields, indicated generally by reference numeral 208, that allow the user to revise the

identifying information about the advertiser that is stored in the integral ADVERTISER DATABASE. In this particular embodiment, the following information is stored in the ADVERTISER DATABASE and may be changed by the advertiser:

Company Name
Address
City
State
Zip
Contact Name
Contact Email
Contact Phone
User ID
Password

TABLE 4

It is contemplated and preferred that this information be entered through a conventional computer keyboard or similar peripheral device. Once the user has revised any or all of the data, selection of the SAVE button 210 at SELECTION 778 of Figure 52 causes this information to be stored in the integral USER DATABASE at UPDATE 780. A new advertising banner is retrieved at RETRIEVE BANNER 782. The system then returns the user to the PROFILES SCREEN 180, as depicted in Figure 23.

If the user changes his mind and no changes to the identifying information are necessary, selection of the CANCEL CHANGES button 212 at SELECTION 776 of Figure 52 returns the user to the PROFILES SCREEN 180, as depicted in Figure 23, with no updates being made to the ADVERTISER DATABASE.

Finally, in relation to "advertiser" options, as discussed above, by selecting the HOW TO

ADVERTISE tab 172d, the user can view instructions on how to advertise, that is, instructions on how the preferred system works. Figure 27 depicts a preferred HOW TO ADVERTISE SCREEN 230. As shown in Figure 27, various text and associated hyperlinks can be displayed in the central message window 14 of the HOW TO PRESENT SCREEN 230.

5 To carry out execution of the routines and subroutines of the referred system described above, it is understood that standard Hypertext Markup Language (HTML) and associated programming languages and techniques would be used. With benefit of the foregoing description, such programming is readily accomplished by one of ordinary skill in the art.

10 Furthermore, it will be obvious to those skilled in the art that modifications may be made to the preferred embodiments described herein without departing from the spirit and scope of the present invention.
